

Assignment 8

Name: Anuska Nath

Roll: 002311001003

Dept: Information Technology (A1)

Year: UG-3

Exercise 3: Flying bird

Aim:

To create a flying bird animation using Macromedia Flash 8.

Procedure:

Step 1: Create a new document in Flash.

Step 2: Import the bird images (different flying postures) into the Library using *File* → *Import* → *Import to Library*.

Step 3: Insert a new layer and drag the first bird image onto the stage.

Step 4: Convert the image into a symbol by pressing **F8** and selecting *Graphic*.

Step 5: Insert multiple keyframes using **F6** to create frames for animation.

Step 6: In each keyframe, place a different bird posture image to simulate motion.

Step 7: Convert each image into a graphic symbol and arrange them sequentially across frames.

Step 8: Slightly adjust the position of the bird in each frame using the *Free Transform Tool* to create a flying effect.

Step 9: Add a background layer to enhance the animation.

Step 10: Set an appropriate frame rate (10–12 fps) for smooth motion.

Step 11: Press **Ctrl + Enter** to preview the animation.

Screenshots:

(Insert screenshots of different bird postures used in animation below)
